Date: 2023-09-14

Aim:

Write a java program to demonstrate operator precedence and associativity

Source Code:

```
OperatorPrecedence.java
import java.util.Scanner;
class OperatorPrecedence {
       public static void main(String[] args) {
               int x,result;
               System.out.print("Enter a num: ");
               Scanner sc=new Scanner(System.in);
               x=sc.nextInt();
               result=x++ +x++*--x/x++- --x+3>>1|2;
               System.out.println("The operation going is x+++x++*--x / x++---x+3
>> 1 | 2");
               System.out.println("result = "+result);
       }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter a num:
The operation going is x++ + x++ * --x / x++ - --x + 3 \Rightarrow 1 | 2
result = 3
```

```
Test Case - 2
User Output
Enter a num:
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2
result = 2
```

Exp. Name: Sample program on java to demonstrate Control structures

Date: 2023-09-14

Aim:

write a java program that uses if-else control statement and print the result

Source Code:

```
Control.java
import java.util.Scanner;
class Control {
        public static void main(String args[]) {
                int x,y,z;
                Scanner sc=new Scanner(System.in);
                System.out.print("Enter first num : ");
                x=sc.nextInt();
                System.out.print("Enter second num : ");
                y=sc.nextInt();
                z=x+y;
                if(z<20)
                System.out.println("x + y is less than 20");
                System.out.println("x + y is greater than 20");
        }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter first num :
13
Enter second num :
x + y is less than 20
```

```
Test Case - 2
User Output
Enter first num :
24
Enter second num :
10
x + y is greater than 20
```

3.NO. 1

Aim:

Write Java program on use of Inheritance.

Create a classVehicle

• contains the data members **color** of String type and **speed** and **size** of integer data type.

Exp. Name: A program to illustrate Inheritance

• write a methodsetVehicleAttributes() to initialize the data members

Create another classCarwhich is derived from the classVehicle

- contains the data membersccandgearsofintegerdata type
- write a methodsetCarAttributes() to initialize the data members
- write a method display Car Attributes () which will display all the attributes.

Write another class InheritanceDemo with main() it receives five arguments color, speed, size, cc and gears.

Source Code:

```
InheritanceDemo.java
import java.util.Scanner;
class Vehicle{
        String colour;
        int speed;
        int size:
        void setVehicleAttributes(String c,String s,String sp){
                colour = c;
                speed = Integer.parseInt(s);
                size = Integer.parseInt(sp);
class Car extends Vehicle {
        int CC;
        int gears;
        void setCarAttributes(String c,String s,String sp,String cce,String gear) {
                setVehicleAttributes(c,s,sp);
                CC = Integer.parseInt(cce);
                gears = Integer.parseInt(gear);
                displayCarAttributes();
        }
        void displayCarAttributes(){
                System.out.println("Color of Car : "+colour);
                System.out.println("Speed of Car : "+speed);
                System.out.println("Size of Car : "+size);
                System.out.println("CC of Car : "+CC);
                System.out.println("No of gears of Car : "+gears);
        }
public class InheritanceDemo {
        public static void main(String args[])
                Car b1 = new Car();
                b1.setCarAttributes(args[0],args[1],args[2],args[3],args[4]);
        }
}
```

Test Case - 1		
User Output		
Color of Car : Blue		
Speed of Car : 100		
Size of Car : 20		
CC of Car : 1000		
No of gears of Car : 5		

Test Case - 2
User Output
Color of Car : Orange
Speed of Car : 120
Size of Car : 25
CC of Car : 900
No of gears of Car : 5

Exp. Name: write a java program to prevent S.No: 12 inheritance using abstract class.

Date: 2023-11-17

Aim:

write a java program to prevent inheritance using abstract class.

- Create an abstract class Shape
- Create a class Rectangle which extends the class Shape
- Class Rectangle contains a method draw which prints drawing rectangle
- Create another class circle1 which extends Shape
- \bullet Class circle1 contains a method $\mbox{\bf draw}$ whcih prints $\mbox{\bf drawing circle}$
- Create a main class (TestAbstraction1
- Create object for the class circle1 and called the method draw

Source Code:

```
TestAbstraction1.java
abstract class shape
{
        abstract void draw();
class Rectangle extends shape
        void draw()
                System.out.println("drawing rectangle");
}
class Circle1 extends shape
        void draw()
                System.out.println("drawing circle");
}
class TestAbstraction1
        public static void main(String args[])
        {
                shape s = new Circle1();
                s.draw();
        }
```

Execution Results - All test cases have succeeded!

Test Case - 1 **User Output** drawing circle

ID: 224G1A05C3 Page No: 15

2022-2026-CSE-B

Aim:

write a program on dynamic binding

Source Code:

```
Demo.java
class Human{
        public void walk()
                System.out.println("Human walks");
class Demo extends Human{
        public void walk(){
               System.out.println("Boy walks");
        public static void main(String args[]){
                Human obj = new Demo();
                Human obj2 = new Human();
                obj.walk();
                obj2.walk();
        }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Boy walks
Human walks

ID: 224G1A05C3 Page No: 16

Exp. Name: Sample program on method overloading

Exp. Name: Sample program on method overriding

Date: 2023-11-17

Aim:

Write a program on method overriding

Source Code:

```
Bike.java
class Vehicle {
       void run() {
               System.out.println("Bike is running safely");
class Bike extends Vehicle {
       public static void main(String args[]) {
               Bike obj=new Bike();
               obj.run();
       }
}
```

Execution Results - All test cases have succeeded!

Test Case - 1

User Output

Bike is running safely

ID: 224G1A05C3 Page No: 18

Aim: Write a Java program that implements an interface.

```
Create an interface called (Car) with two abstract methods (String getName()) and (int getMaxSpeed()). Also
declare one default method void applyBreak() which has the code snippet
 System.out.println("Applying break on " + getName());
```

Exp. Name: Write a Java program to implement

In the same interface include a static method [Car getFastestCar(Car car1, Car car2)], which returns car1 if the maxSpeed of car1 is greater than or equal to that of car2, else should return car2.

Create a class called BMW which implements the interface Car and provides the implementation for the abstract methods getName() and getMaxSpeed() (make sure to declare the appropriate fields to store name and maxSpeed and also the constructor to initialize them).

Similarly, create a class called Audi which implements the interface Car and provides the implementation for the abstract methods getName() and getMaxSpeed() (make sure to declare the appropriate fields to store name and maxSpeed and also the constructor to initialize them).

Create a **public** class called MainApp with the **main()** method.

Take the input from the command line arguments. Create objects for the classes [BMW] and [Audi] then print the fastest car.

Note:

Java 8 introduced a new feature called default methods or defender methods, which allow developers to add new methods to the interfaces without breaking the existing implementation of these interface. These default methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

Below is the syntax for declaring a default method in an interface :

```
public default void methodName() {
    System.out.println("This is a default method in interface");
}
```

Similarly, Java 8 also introduced static methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Below is the syntax for declaring a static method in an interface :

```
public static void methodName() {
    System.out.println("This is a static method in interface");
```

2022-2026-CSE-

```
ID: 224G1A05C3 Page No: 20
```

2022-2026-CSE-B

```
q11284/MainApp.java
package q11284;
interface Car{
       public String getName();
        public int getMaxSpeed();
        public default void applyBreak()
                System.out.println("Applying Break on "+getName());
        }
        public static Car getFastestCar(Car car1, Car car2)
                if(car1.getMaxSpeed()>=car2.getMaxSpeed())
                        return car1;
                else
                        return car2;
        }
class BMW implements Car {
                String name;
                int speed;
                public BMW(String n ,String s){
                speed=Integer.parseInt(s);
                name =n;
        public String getName(){
                return name;
        public int getMaxSpeed(){
                return speed;

Exp. Name: program to create a super class called Figure that it returns the area of a rectangle and

Aim:

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two subclasses from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

Source Code:

S.No: 24

```
AbstractAreas.java
import java.util.Scanner;
abstract class Figure{
        double dim1;
        double dim2;
        abstract void area();
class Rectangle extends Figure{
        public void area(){
                System.out.println("Rectangle:");
                System.out.println("Area is "+(dim1*dim2));
class Triangle extends Figure{
        public void area(){
                System.out.println("Triangle:");
                System.out.println("Area is "+(0.5*dim1*dim2));
class AbstractAreas{
        public static void main(String args[]){
                Rectangle r1 = new Rectangle();
                Triangle t1 = new Triangle();
                Scanner sc = new Scanner(System.in);
                System.out.println("Enter lenght and breadth of Rectangle :");
                r1.dim1=sc.nextInt();
                r1.dim2=sc.nextInt();
                System.out.println("Enter height and side of Triangle :");
                t1.dim1=sc.nextInt():
                t1.dim2=sc.nextInt();

Exp. Name: Write a Java program demonstrating S.No: 25 Date: 2024-01-05 the usage of Threads

Aim:

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate constructor in the Printer class which implements (Runnable) interface to take three arguments: message, delay and count of types String, int and int respectively.

Write code in the Printer, run() method to print the message with appropriate delay and for number of times mentioned in count.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for **2** seconds you should call Thread.sleep(2000); as the Thread.sleep(...) method takes milliseconds as argument.]

Note: Please don't change the package name.
